

Excellent
even for light-
coloured and
fine hair

Pain-free Hair Removal

The Aesthetics Centre offers the latest laser technology in permanent hair reduction.

Super Hair Removal (SHR) is the next-generation method of hair removal. It uses diode laser with a patented coolant treatment tip that ensures the skin stays cool while the hair follicles are destructed.

It is suitable for all skin types and has been described as one of the most comfortable laser hair removal options available.

The procedure is FDA-approved and done with due care by Dr. Anita Soosay, a trained physician.

How is this laser different from other light-based hair removal treatment?

It is painless due to the unique coolant tip

Numbing cream is usually not needed so no need to wait an extra 30 minutes

Treatment time is shorter as the laser is used in a fast sweeping motion on the skin

It is more efficient (even on light-coloured and fine hair) so fewer sessions are needed for optimal results and no risk of burns
